

Effektivitet

god sikkerhed

dårlig sikkerhed

Ressourceforbrug

The graph illustrates the trade-off between efficiency and resource consumption under two different security conditions. The vertical axis represents 'Effektivitet' (Efficiency) and the horizontal axis represents 'Ressourceforbrug' (Resource consumption). Both curves start at the origin (0,0). The curve for 'god sikkerhed' (good security) is steeper, indicating that efficiency increases rapidly as resource consumption increases. The curve for 'dårlig sikkerhed' (poor security) is flatter, indicating that efficiency increases more slowly with resource consumption. The label 'god sikkerhed' is placed above the steeper curve, and 'dårlig sikkerhed' is placed above the flatter curve.
