

The diagram illustrates a network topology. At the top, a light blue cloud labeled 'internet' is connected to a central white box representing a 'Router Juniper EX4200 Chassis cluster'. This central router is also connected to two other white boxes: 'Router Telenor' on the left and 'Router Solido Networks' on the right. Below the central router, two black switch-like devices are shown, connected to a light blue cloud at the bottom labeled 'Xstream PI IP Range'. Each switch has a row of green status lights and a row of ports. A line connects the left switch to the central router, and another line connects the right switch to the central router. A blue line also connects the two switches.
