Warning

This is just a taste of crypto - introduction

Dont feel secure until you have experience and understand the programs better.

BUT learn the tools before you need them

Internet: A very short story

1969: ARPANET 4 nodes

World wide network - of networks!

No owner, no single entity responsible

International, cross border, spans the world

Now 50.000 ASNs announced, and 80.000 allocated

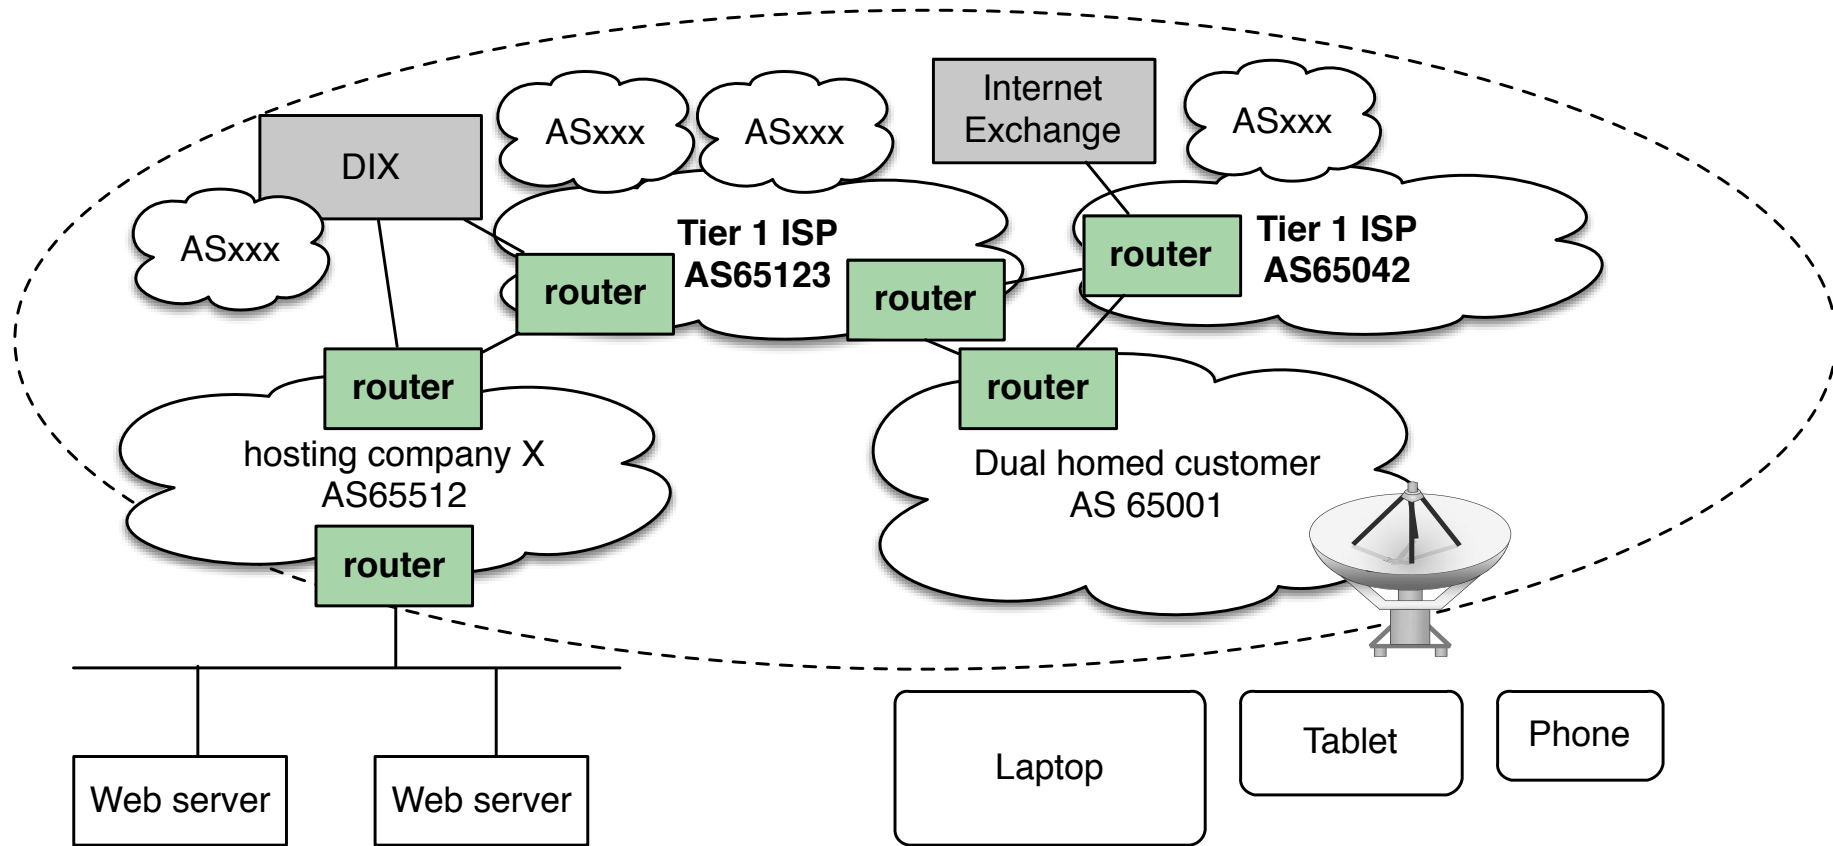

Now 515.000 prefixes - reach 550.000 routes/prefixes in 2015?

Solidaritetskryptering

Hvorfor skal vi kryptere?

Køn

Seksualitet

Tro religion

hatecrimes

Politisk overbevisning, eller blot aktiv

Whistleblowers

soldater

diplomater

Du bestemmer ikke hvem der diskrimineres eller trues i andre lande

Når vi krypterer hjælper vi andre! **Solidaritetskryptering**

Kryptografi er læren om, hvordan man kan kryptere data

Kryptografi benytter algoritmer som sammen med nøgler giver en ciffertekst - der kun kan læses ved hjælp af den tilhørende nøgle

Public key kryptografi - 1

privat-nøgle kryptografi (eksempelvis AES) benyttes den samme nøgle til kryptering og dekryptering

offentlig-nøgle kryptografi (eksempelvis RSA) benytter to separate nøgler til kryptering og dekryptering

Public key kryptografi - 2

offentlig-nøgle kryptografi (eksempelvis RSA) bruger den private nøgle til at dekryptere
man kan ligeledes bruge offentlig-nøgle kryptografi til at signere dokumenter
- som så verificeres med den offentlige nøgle

NB: Kryptering alene sikrer ikke anonymitet

- Tor prevents anyone from learning your location or browsing habits.
- Tor is for web browsers, instant messaging clients, remote logins, and more.
- Tor is free and open source for Windows, Mac, Linux/Unix, and Android

Der findes alternativer, men Tor er mest kendt

Der findes diverse tools til Tor, Torbutton on/off knap til Firefox osv.

Det anbefales at bruge Torbrowser bundles fra <https://www.torproject.org/>

What is this all about?

Enigmail is a security extension to Mozilla Thunderbird and Seamonkey. It enables you to write and receive email messages signed and/or encrypted with the OpenPGP standard.

Sending and receiving encrypted and digitally signed email is simple using Enigmail.

When starting it for the first time, you are guided through the basic setup. We also prepared a new users' guide that explains how to use OpenPGP.
