

Click the buttons below to set up or make changes to your AirPort Base Station.

To configure or change advanced settings, click Show All Settings.

- Show Summary
- Name and Password
- Internet Connection
- Show All Settings

The base station name is used to easily identify a specific base station on a network with multiple base stations. The base station password protects the configuration so that only the owner can make changes.

Base Station Name:

Change password...

The network name is used by you and others to join your wireless network. To increase the security of your network, click "Enable encryption" and enter a password to be required when joining your network.

Wireless Network Name:

☒ Enable encryption (using WEP)
